

Vector-Valued Monte Carlo Integration Using Ratio Control Variates: Errata

1 MODIFICATION OF SUPPLEMENTARY MATERIAL

- The original version of the supplementary material is available [here](#).
- Appendix A.3 was previously an incorrect duplicate of Appendix A.5; it has now been replaced with the correct proof of Theorem 3.
- In Appendix A.8, we now approximate the MSE using a geometric series, which is more concise, tighter, and easier to understand.
- In Appendix A.10, we corrected minor typos related to the $\frac{1}{N}$ term, which was previously incorrect.
- We have removed outdated terminology such as "lockstep estimator" and "single-response estimator," which correspond to "vector-valued importance sampling" and "partial vector-valued importance sampling" in the final version.
- Minor typos have been corrected, and notations have been revised for better consistency throughout the text.
